

QUESTION

Industrial wastewater is treated in a wastewater treatment plant.

The wastewater treatment plant has two stages.

Stage 1 is a primary treatment stage.

1. The wastewater is screened.
2. The wastewater is settled.

Stage 2 is a secondary treatment stage.

1. The wastewater is aerated.
2. The wastewater is settled.
3. The wastewater is filtered.
4. The wastewater is disinfected.

The wastewater treatment plant has a final settling tank.

The final settling tank is used to settle the sludge.

The sludge is recycled back to the primary treatment stage.

The effluent is discharged to the receiving water body.

The effluent is used for irrigation.

The effluent is used for industrial processes.

The effluent is used for domestic purposes.

The effluent is used for agricultural purposes.

The effluent is used for recreational purposes.

The effluent is used for aesthetic purposes.

The effluent is used for environmental purposes.

The effluent is used for scientific purposes.

The effluent is used for historical purposes.

The effluent is used for cultural purposes.

The effluent is used for religious purposes.

The effluent is used for artistic purposes.

The effluent is used for entertainment purposes.

The effluent is used for educational purposes.

The effluent is used for research purposes.

The effluent is used for development purposes.

The wastewater treatment plant has a final settling tank.

The final settling tank is used to settle the sludge.

The sludge is recycled back to the primary treatment stage.

The effluent is discharged to the receiving water body.

The effluent is used for irrigation.

The effluent is used for industrial processes.

The effluent is used for domestic purposes.

The effluent is used for agricultural purposes.

The effluent is used for recreational purposes.

The effluent is used for aesthetic purposes.

The effluent is used for environmental purposes.

The effluent is used for scientific purposes.

The effluent is used for historical purposes.

The effluent is used for cultural purposes.

The effluent is used for religious purposes.

The effluent is used for artistic purposes.

The effluent is used for entertainment purposes.

The effluent is used for educational purposes.

The effluent is used for research purposes.

The effluent is used for development purposes.

The effluent is used for social purposes.

The effluent is used for economic purposes.

The effluent is used for political purposes.

The effluent is used for legal purposes.

The effluent is used for moral purposes.

The effluent is used for ethical purposes.

The effluent is used for philosophical purposes.

The effluent is used for theological purposes.

The effluent is used for metaphysical purposes.

The effluent is used for spiritual purposes.

The wastewater treatment plant has a final settling tank.

The final settling tank is used to settle the sludge.

The sludge is recycled back to the primary treatment stage.

The effluent is discharged to the receiving water body.

The effluent is used for irrigation.

The effluent is used for industrial processes.

The effluent is used for domestic purposes.

The effluent is used for agricultural purposes.

The effluent is used for recreational purposes.

The effluent is used for aesthetic purposes.

The effluent is used for environmental purposes.

The effluent is used for scientific purposes.

The effluent is used for historical purposes.

The effluent is used for cultural purposes.

The effluent is used for religious purposes.

The effluent is used for artistic purposes.

The effluent is used for entertainment purposes.

The effluent is used for educational purposes.

The effluent is used for research purposes.

The effluent is used for development purposes.

The effluent is used for social purposes.

The effluent is used for economic purposes.

The effluent is used for political purposes.

The effluent is used for legal purposes.

The effluent is used for moral purposes.

The effluent is used for ethical purposes.

The effluent is used for philosophical purposes.

The effluent is used for theological purposes.

The effluent is used for metaphysical purposes.

The effluent is used for spiritual purposes.

QUESTION

ANSWER

The wastewater treatment plant has a final settling tank. The final settling tank is used to settle the sludge. The sludge is recycled back to the primary treatment stage. The effluent is discharged to the receiving water body. The effluent is used for irrigation. The effluent is used for industrial processes. The effluent is used for domestic purposes. The effluent is used for agricultural purposes. The effluent is used for recreational purposes. The effluent is used for aesthetic purposes. The effluent is used for environmental purposes. The effluent is used for scientific purposes. The effluent is used for historical purposes. The effluent is used for cultural purposes. The effluent is used for religious purposes. The effluent is used for artistic purposes. The effluent is used for entertainment purposes. The effluent is used for educational purposes. The effluent is used for research purposes. The effluent is used for development purposes. The effluent is used for social purposes. The effluent is used for economic purposes. The effluent is used for political purposes. The effluent is used for legal purposes. The effluent is used for moral purposes. The effluent is used for ethical purposes. The effluent is used for philosophical purposes. The effluent is used for theological purposes. The effluent is used for metaphysical purposes. The effluent is used for spiritual purposes.
